Black and white printing specification.
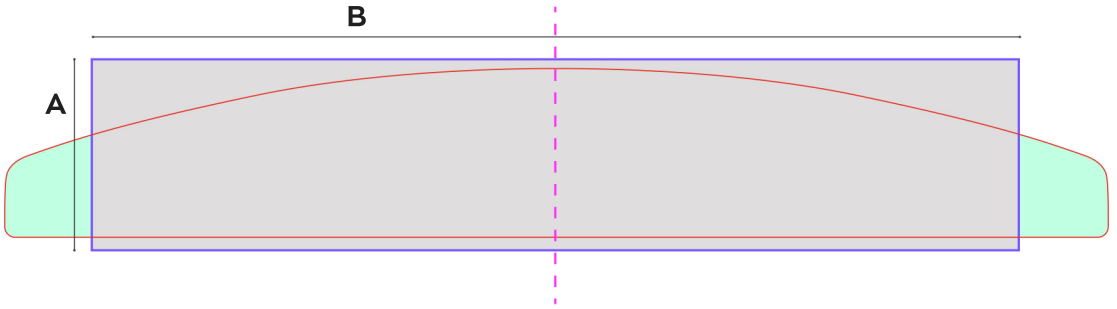

1. The file ready to print should be prepared in .pdf or .ai format (editable).

2. The logo should be in vector version, optionally in .png format, without background, in very high quality.

3. A print does not include white colour so all white elements will be finally transparent.

4. We will receive the best quality when all images will be in a vector graphics

5. File should be prepared in CMYK format.

6. Print area is 147 mm width and heigh of choosen nail file.

7. To the printing which will be beyond the nail file shape should be added 2 mm of slope

---

IMPORTANT INFORMATIONS - PRINT DESCRIPTION:

A The high of printing is equal to the high of nail file regardless of the nail file's shape.

B Printing width is 147 mm independently to the shape.

Space marked with this color is printable area.

Space marked with this color is beyond the print area.

The area marked with this color is the area of the print with a slope, that should be prepared in case the elements of the print reach the edge of nail file shape.

The place marked with this line means that in this place should not be any important elements due to the connection of Printing heads. This field is about 1mm wide. We do not recommend placing the logo in the middle of the file.
